

Ultrasound Bone Densitometer Professional Manufacturer
Ultrasound Bone Densitometer National Standard Drafting Unit
The First Domestic Products Pass EMC-Electro Magnetic Compatibility

BMD-A7

Ultrasound Bone Densitometer

*Measuring Bone Mineral Density
or Bone Strength of the People's Radius
and Tibia. It is for Preventing Osteoporosis.*

Configuration:

1. Trolley Ultrasound Bone Densitometer Main unit
(inner Dell business Computer with i5CPU)
2. 1.20MHz Probe
3. BMD-A7 Intelligent Analysis System
4. Canon Color InkJet Printer G1820
5. Dell 19.5 inch Color LED Monitor
6. Calibrating Module(Perspex sample)
7. Medical disinfection couplant

-  Large Scale Integrated circuit
-  Multi-layer circuit board design
-  High shielding multipoint signal contact mode
-  Precise brushed metal mould manufactured
-  Dell business computer
-  Special analysis system based on different countries people

BMD-A7

Ultrasound Bone Densitometer

Characteristics:

- Full dry technology, makes diagnostic more convenient.
- Measurement parts: Radius and Tibia.
- Probe frequency: 1.20mhz, DuPont Technology
- Measurement method: double engine and double receiver
- Measurement parameters: Speed of Sound (SOS)
- Measurement time: adult <15 Seconds, Children <3 Seconds,
- The measurement process is simple and fast
- It with different countries clinical database, including: European, American, Asian, Chinese,
- WHO international compatibility. It measuring the people between the age of 0 and 120.(Children and Adult)

Application:

Our BMD have extensive application: It is suitable for large specialized hospitals. Such as Maternal and Child Health Centers, Geriatric Hospital, Sanatorium, Rehabilitation Hospital, Bone Injury Hospital, Physical Examination Center, Health Center, Community Hospital,

The Department of the General Hospital, Such as Pediatric Department, Gynecology and Obstetrics Department, Orthopedics Department, Geriatrics Department, Physical Examination, Department, Rehabilitation Department
